Dukane's Connected Classroom

Struggle Less!

**Student
Response
in the
Cloud**

**A Learning
Catalyst!**

- **Student engagement skyrockets**
"My test score's went up 25%!"- Laura DeHart, IPS
- **Enhance and simplify data collection efforts-instant scoring, grading and aggregating.**
- **Instant feedback for students on all devices**
- **Save teachers time with instant polling, easily use PowerPoint and existing digital curriculum**
- **Use virtual responders (tablets, pc, etc) or physical responders (yellow) or mix/match**

Dukane's Convey Solutions combines the locally installed Convey response application (Windows OS only) powered by Convey Enterprise Services (CES - the cloud-based server) and student response devices (either physical or virtual) to catalyze classroom learning experiences like never before.

Convey Enterprise Services transforms Student Response:

- School and/or District wide roster syncing makes setup a snap!
- Share questions and playlists easily to promote best practices
- Collect and aggregate data from across your campus and across the district
- Quick, web-based access to reports support better student-focused decisions
- Centrally monitor your usage and implementation to ensure planned adoption
- Easily use PowerPoint or other digital curriculum. Convey allows for instant polling with any curriculum using the floating Question Player toolbar.

Getting started is easy:

1. Choose the number of students you wish to activate.
2. Provide total roster population to be loaded into the CES.
3. Pick an adequate and robust professional training plan and timeline to roll out the program. We recommend at least two full days of training per year.
4. Choose how many virtual and how many physical (yellow) responders you need for your program. There is no charge for the virtual responder but students must have a seat license.

Your Convey representative will help you through this selection process and explain the subscription process including initial setup and configuration fee and annual maintenance fee. Physical responders are a one-time purchase and are warranted for 5 years.

Virtual Responder Specifications:

- Virtual responders (VR) allow any device with a browser* to be used to respond to questions in place of a dedicated, physical responder.
- iPhone, iPad, iPod touch, PC or Mac, Android phone or tablet, netbook, laptop, desktop with a browser* can all be used as a VR.
- VR's are flexible, allowing users to have a multi-function device. They work great in a 1-to-1 computing rollout.
- VR's can be mixed with dedicated, hardware responders in a single polling session.
- VR's are free! The Active Student License covers a student using either a hardware or virtual responder. The student can use whatever device is handy at the moment, switching back and forth as availability dictates.

*Check online for the latest info regarding any browser issues that may crop up.
